Peter Millar streamlines multi-platform inventory management with BlueCherry API integration

PETER MILLAR

Customer background

INDUSTRY: Luxury apparel & retail

COMPANY SIZE: Global brand with retail, e-commerce (B2C & B2B), and point-of-sale operations

BUSINESS NEEDS: A centralized, scalable solution for inventory and return management that integrates seamlessly across systems

Challenges

Limited real-time visibility into inventory across platforms

Manual inefficiencies in returns processing and inventory transfers

Disconnected systems creating data silos

High development costs and resource demands

Solution

CGS implemented a BlueCherry API integration with supporting middleware and automated utilities, allowing Peter Millar to:

- **Enable real-time tracking of in-transit inventory**
- **Automate return updates and data validation processes**
- **Synchronize data flow between internal systems, 3PLs, and Salesforce**
- **Eliminate manual processes and reduce operational bottlenecks**

Results

Faster inventory visibility: Near real-time tracking across warehouses, 3PL, and WMS

Efficient data exchange: Automated, error-free synchronization across platforms

Improved returns management: Salesforce integration enhanced speed and accuracy

Streamlined operations: Reduced reliance on manual processes, decreasing labor and error rates

Cost savings: Avoided high development costs with a flexible, scalable API solution

Implementation processs

1 **Assessment & planning:** Reviewed infrastructure and identified integration goals

2 **Solution design:** Created a custom BlueCherry API framework

3 **Development & integration:** Built lightweight middleware and automated data transformation

4 **Testing & optimization:** Validated data accuracy and system performance

5 **Deployment & training:** Phased rollout with minimal disruption and full user training

6 **Testing & optimization:** Validated data accuracy and system performance

> "
>
> The CGS BlueCherry API solution provided a seamless, efficient way to manage our inventory and system integrations. The flexibility and rapid deployment allowed us to optimize operations without unnecessary delays.
